

# COPY II PC DELUXE OPTION BOARD

*"The most gifted  
of backup systems."*  
—PC Magazine

## The ultimate solution to backing up copy- protected software.

### Now twice as powerful.

Besides reading and writing Mac disks (see page 6), our Copy II PC Deluxe Option Board is also the most comprehensive disk duplication system for PCs you can buy. An auxiliary controller that supplements your floppy disk controller, it **allows your PC to make exact backups of software, using the same advanced technology employed by commercial disk duplication firms.**

So advanced is the circuitry of the Deluxe Option Board, it can even backup many non-IBM formats, including Macintosh, Apple II 5¼" and 3.5", Atari, Amiga, Commodore, and many others. It's so versatile, many software companies use it to duplicate their own software.

**You can depend on the Deluxe Option Board to handle practically any copy protection scheme.** With it, you'll be able to back up virtually every copy-protected program.

*"It made copies of all the programs we  
tried with no problems."* —InfoWorld

### Easy to install and use.

The Copy II PC Deluxe Option Board comes complete with software and easy-to-follow board installation instructions. It requires just one half-length slot and does not interfere in any way with your computer's functions. Even better, it's a cinch to operate.

The Deluxe Option Board's software is fully menu-driven and automatically recognizes 99% of all copy-protection schemes.

In short, the Copy II PC Deluxe Option Board is the easiest, most reliable way to protect your valuable software investment.

**Now supports 1.2M and  
1.44M drives!**

*"Central Point is to be commended for  
the thorough engineering evident in the  
Option Board."*

—Computer Buyer's  
Guide and Handbook
